Acquisition plan
for *SignWell*

Plan

Most of your budget goes to non-brand searches that do not convert, and your tracking cannot support smart bidding. We fix the tracking first, then run Google Search and Meta on clean data.

WHERE YOU ARE

- Non-brand search takes 52% of your spend and returns 1.9% of your sign-ups.
- Duplicate pixels sit on your site and feed bad signals to Meta.
- You have two Tag Manager containers and two GA4 properties, so smart bidding gets mixed signals.

WHAT WE CHANGE

- We write one tracking spec, then open a Google Ads account in your name.
- We lead with brand search while the new account learns, and we test non-brand campaigns to find the keywords worth funding.
- We set Meta up in October while the Google account learns, then scale it from November. LinkedIn and Reddit wait until Q1.
- You get one live dashboard and a report every two weeks.

WHAT IT COSTS

\$20k to \$25k

That is a month in media, which is the budget you run today. October starts at \$20,000, nearly all of it on Google while we rebuild. From November, Google holds at \$15,500 a month and every added dollar funds Meta.

Month by month, *October to January*

Brand search carries October while the new account learns, and we set Meta up beside it. November launches Meta and adds non-brand budget. December opens retargeting and lines up LinkedIn, Reddit and ChatGPT ads for Q1.

October

Launch and learn

OCT \$20,000 MEDIA

- SEARCH We move search into an account you own, lead with brand terms, and keep non-brand running.
- SOCIAL We start prepping the Meta ad account, integrations and tracking.
- TRACKING We fix the Meta pixels, set up Meta CAPI, and merge Google Tag Manager.

November

Scale what works

NOV \$22,500 MEDIA

- SEARCH We add buyer-led non-brand campaigns and fund the ones that stay under \$70 a qualified sign-up.
- SOCIAL Meta goes live. We move spend to the ads that bring qualified sign-ups.
- TRACKING We import purchases with their real value, and full reporting starts.

December

Fund the winners

DEC \$25,000 MEDIA

- SEARCH With two months of non-brand data, we scale the keywords that work and plan ChatGPT ads for Q1.
- SOCIAL We open Meta retargeting, raise spend on the ads that stay under \$70, and plan LinkedIn and Reddit for Q1.
- TRACKING You have two months of clean data, so you choose the next move from numbers you trust.

January

The result

You own your accounts, and you choose the next channel to fund from your own numbers.

Five buyers, *five different ads*

We split non-brand search by buyer, then write each ad around what SignWell offers: API pricing, team seats, a signed BAA, and NOM-151.

API builders

25 Live API Docs Free Monthly

Send legally binding API documents with a card on file. Then from \$0.85 each.

Growing teams

3 Senders From \$30 a Month

Unlimited templates for your team. \$30 billed yearly, or \$36 monthly with no contract.

Healthcare

Signed BAA, Month to Month

HIPAA eSignatures with a signed BAA and SOC 2 Type II. Built for home care teams.

DocuSign switchers

Unlimited Documents From \$12

Leaving DocuSign? Send unlimited documents from \$12 a month. Cancel anytime.

Mexico

Firma Electrónica NOM-151

Firma contratos con validez legal en México. Empieza gratis, sin tarjeta.

Rebuild

- We open a Google Ads account in your name.
- We split non-brand by buyer: API, teams, healthcare and switchers.
- We stop paying for login searches.

Reallocate

- We cap the current non-brand keywords at \$1,700 a month, which is what they earn today.
- The rest funds brand, switcher, vertical and Meta campaigns.
- LinkedIn stays with your team for now.

Measure

- We measure every campaign against \$70 a qualified sign-up, your break-even.
- We report paying customers and ACV by campaign.
- You get a live Looker Studio dashboard instead of a PDF.

Your tracking, and *your dashboard*

In October we fix the Meta pixels, set up Meta CAPI, and clean up Google Tag Manager. Your first dashboard and report land in October, and full reporting runs from November.

TRACKING

Events we track

- Sign-up.
- Qualified sign-up, with the questionnaire answers.
- Document sent.
- Limit hit.
- Plan changed.
- Purchase, with the amount paid.

All six run through one GA4 property and one container.

CLEANUP

Tags we fix

- We make each Meta pixel fire once.
- We set up Meta CAPI to send sign-ups and purchases from the server.
- We merge two Tag Manager containers into one.
- We import purchases into Google Ads.

DASHBOARD

What the dashboard shows

- Spend, sign-ups and paying customers, by campaign.
- Cost per qualified sign-up, against \$70.
- Spend and sign-ups by keyword.
- ACV by channel and by vertical.
- Updated daily, so you can open it any day.

Reporting starts in October, and *runs in full from November.*

Clean signals in week 1, *real purchase value by November*

Meta and the new Google Ads account launch on clean sign-up tracking. Your engineers add six events once, and by November purchases reach both platforms with their real value.

Clean up

Remove the bad tags

OCT WEEK 1

- WE DO** We remove the dead and copied tags, make the Meta pixel fire once, and track sign-ups in the new Google Ads account.
- YOU GIVE** Admin access to Tag Manager, GA4, Google Ads and Meta.
- DONE WHEN** We record each sign-up once on both platforms, from launch day.

Rebuild

One spec, one container

OCT WEEKS 2 TO 4

- WE DO** We write the spec for the six events, merge the two containers and two GA4 properties, and set up Meta CAPI.
- YOU GIVE** One engineer to add the six events to the app from our spec.
- DONE WHEN** Platform counts match your app database within a margin we agree first.

Connect

Send purchase values back

NOV WEEKS 5 TO 8

- WE DO** We import purchases and replace the flat \$14 sign-up value with values by use case.
- YOU GIVE** A daily export of purchases and plan changes from billing.
- DONE WHEN** The dashboard shows cost per paying customer by campaign.

From November

The result

Every sign-up and purchase reaches Google Ads, Meta and your dashboard with its real value, so bidding and reporting run on the same numbers.

Your August data, *on one dashboard*

This is a sample of the dashboard you get, built from your real August numbers. Paying customers and ACV stay empty until we import purchases in November.

Plus 481 sign-ups that arrived through Sign in with Google, with no campaign attached.

Every sign-up, *down to the keyword level*

Your current agency has never shown you what each keyword costs, so these are example keywords in the layout you get in week one. Your own numbers replace them on day one.

SignWell · Keywords

SAMPLE DASHBOARD · EXAMPLE KEYWORDS, NOT YOUR DATA

Brand keywords

KEYWORD	MATCH	SPEND	QUALIFIED	COST EACH
signwell	Exact	\$1,963	640	\$3.07
sign well	Phrase	\$784	259	\$3.03
signwell pricing	Exact	\$341	104	\$3.28
signwell login	Exact	\$893	41	\$21.78
Total		\$3,981	1,044	\$3.81

Non-brand keywords

KEYWORD	MATCH	SPEND	QUALIFIED	COST EACH
electronic signature	Broad	\$3,120	3	\$1,040
esignature software	Phrase	\$2,016	4	\$504
free electronic signature	Broad	\$1,642	2	\$821
docusign alternative	Phrase	\$1,626	10	\$163
digital signature api	Exact	\$684	5	\$137
Total		\$9,088	24	\$378.68

SAMPLE DASHBOARD, EXAMPLE KEYWORDS

Qualified sign-ups

WHERE THE MONEY GOES

Three generic keywords took \$6,778 for 9 sign-ups, at \$753 each.

WHERE THE BUYERS ARE

Two buyer-led keywords took \$2,310 for 15 sign-ups, at \$154 each.

WHAT WE STOP

The login keyword took \$893 from people who already pay you.

What you read *every two weeks*

One page report every two weeks, built from the same data as the dashboard. This is your August data, written the way we would have reported it.

WHAT HAPPENED

Results for the period

- Brand search brought 1,044 qualified sign-ups at \$3.81 each, which is 81% of every sign-up we can trace.
- Non-brand search took 52% of spend for 24 sign-ups at \$378.68 each.
- LinkedIn spent \$2,341.70 and recorded no sign-ups.
- 481 sign-ups came through Sign in with Google with no campaign attached.

WHAT WE CHANGE

The next two weeks

- We cap the current non-brand keywords at \$1,700 and fund buyer-led campaigns.
- We exclude brand terms from Performance Max, so its sign-ups are its own.
- We add a referral exclusion for Sign in with Google, so those 481 keep their real source.

WHAT WE NEED

Two things to confirm

- August billed \$17,342 against a \$20,000 budget. Tell us what the \$2,658 difference covers.
- Approve next month's media budget.

Each report ends with what we change next, and *what we need from you*.

Where the *\$20,000 to \$25,000* goes each month

Google carries October while we rebuild the account. Meta takes a bigger share as its tracking and creative come online. We set the campaign split in week one, once we can see inside the account.

OCTOBER

\$20,000

Google about 90%

Meta about 10%

Brand and non-brand search carry the month. Meta spend starts only after the pixel is clean.

NOVEMBER

\$22,500

Google about 70%

Meta about 30%

Meta goes live alongside the accounting vertical test, and non-brand scales into the pockets that work.

DECEMBER

\$25,000

Google about 60%

Meta about 40%

Retargeting opens, and budget follows the campaigns that are performing well. We review LinkedIn, Reddit and ChatGPT ads for Q1.

These shares show direction, not a commitment. We set the campaign-level split in week one.

Every new line has a kill date. We pause any line that misses its target.

The accounts stay in SignWell's name. The spend, the history and the data stay yours.
