\$24,794

Total attributed value

TOTAL ROAS

1.43x

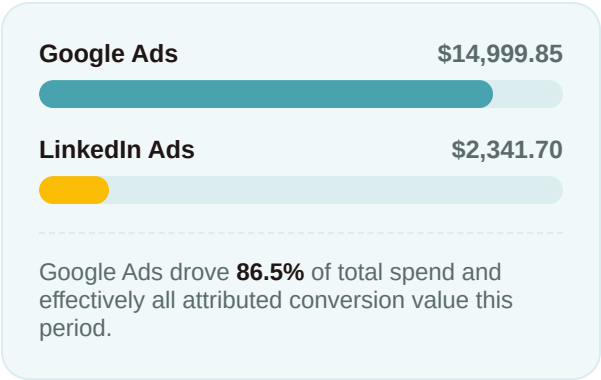

Revenue per \$1 of ad spend

✓

Attribution analysis recovered 481 additional qualified sign-ups (\$6,734 in value) from accounts.google.com referral sessions correctly attributable to Paid Search — lifting reported performance from initial platform-only figures.

1.04x → 1.43x ROAS

Spend Allocation

Performance by Channel & Campaign Type

CHANNEL / CAMPAIGN	SPEND	% OF SPEND	SIGN-UPS	% OF CONV.	CONV. VALUE	ROAS
● Google – Brand Search Branded keywords	\$3,981.44	23.0%	1,044	81.0%	\$14,616	3.67x
● Google – Non-Brand PMax Performance Max	\$1,930.22	11.1%	222	17.0%	\$3,108	1.60x
○ Google – Non-Brand Search Non-brand keywords	\$9,088.20	52.4%	24	1.9%	\$336	0.04x
● LinkedIn Ads No direct or assisted conversions	\$2,341.70	13.5%	—	—	\$0	0.00x

KEY FINDING

Key Event Attribution Paths

Platform-reported figures for August understated performance: 1,290 qualified sign-ups and \$18,060 in conversion value across Google Ads and LinkedIn Ads, for a raw ROAS of 1.04x.

A review of Key Event Attribution Paths in GA4 identified 481 additional qualified sign-ups (\$6,734 in value) originating from accounts.google.com referral sessions — traffic that platform-level reporting missed but that GA4's path data confirms is attributable to Paid Search. Once included, revised August performance stands at 1,771 qualified sign-ups, \$24,794 in conversion value, and a 1.43x total ROAS.

Recommendation: Non-Brand Search (\$9,088.20 spend, 0.04x ROAS) remains the clearest drag on efficiency and should be reviewed for keyword/budget reallocation toward Brand Search and PMax, which are driving the vast majority of qualified sign-ups.
